## Portfolio :: Custom Stainless Steel

Custom Metal Furniture – Nashville, TN

### DESIGNER:

Polifilo  
Nashville, TN

### PROJECT INFORMATION:

Designed by Polifilo Architects, these three pieces of .25 inch aluminum furniture show the craftsmanship of our fabricators. Polished radius edges and sharp break lines form the continuous sheet of metal into elegant functional seating.

### DETAIL:

The chair integrates the backrest into the seat with simple curves. The design with complex breaks and the front radius being greater than the rear, challenged our workers to produce the dream of the designers. The tall stool stretches the form of the smaller one to bar height. Additional stabilization was given to the stool by adding a round footrest. The aluminum was powder-coated following fabrication to give it a bead-blasted finish.
