ARCHITECT:

DAAD Group
Nashville, TN

PLANTING DESIGN:

Design Resource
LaVergne, TN

ROOF SYSTEM:

Tremco Built-Up roof

ROOF AREA PROFILE:

1,000 square feet
New Construction

PROJECT INFORMATION:

Morgan Park Place is a new condominium community that is part of the revitalization of north Nashville. Designed as an eco-friendly community, these townhomes promote many options for people looking to minimize their impact on the environment.

DETAIL:

The extensive green roof began with a Tremco Built-Up roof to protect the interior of the building. After the membrane was secured, the engineered media, pea gravel edging, and decorative plants completed the green roof. The first photo shows the completed waterproofing of the roof. The second photo documents the installation of the plants. This roof garden also has a patio area with potted plants. A paver walkway invites the owners to meander through the green space. To add interest and variety, square metal dividers are filled with two types of rock; Dark Mexican Beach Stone and Multi-Colored River Rock.
