Carlisle 60 mil black EPDM
with root barrier &
drainage mat

ROOF AREA PROFILE:

200 square feet
Renovation

PROJECT INFORMATION:

At RD Herbert, we strive to showcase our products and services throughout our office building. Having completed many of the cities' green roofs, our company decided to install an extensive green roof over our own entrance canopy. When a client enters the second-floor reception area, the green roof provides a pleasant view through the windows.

DETAIL:

This photo shows the installation process of the root barrier, drainage mat and metal edging. The metal edging separates the pea gravel from the plantings and does not allow shifting of the growth media and aids in preventing root migration. An assortment of plants chosen for this area include: Liriope Silver Dragon, Dianthus Deltoids, Rosemary, Elijah Blue, and Liriope Big Blue.
